MyMoolah Treasury Platform — TPPP Withdrawal Functionality

Prepared for: PASA (via APSA / Standard Bank Sponsorship) **Date**: 25 March 2026 **Document Reference**: MMTP-TPPP-WITHDRAWAL-001 **Prepared by**: MyMoolah (Pty) Ltd

---

1. Executive Summary

This document addresses PASA's query regarding the withdrawal functionality within the MyMoolah wallet service, specifically the **Cash-Out Network** and **Integrated Retail Network** referenced in our TPPP business case.

Key clarification: MyMoolah does **not** operate its own cash-out or withdrawal infrastructure. The "Cash-Out Network" and "Integrated Retail Network" referenced in our business case describe **third-party VAS product resale** and **partner integrations** — not proprietary withdrawal mechanisms that would require additional Standard Bank sponsorship beyond the existing TPPP scope.

---

2. Cash-Out Network — Flash eeziCash Voucher (Resale Model)

2.1 What It Is

The "Cash-Out Network" referenced in our business case describes the **resale of Flash eeziCash voucher PINs**. MyMoolah is a **registered reseller** of Flash's prepaid voucher products via the **Flash Partner API v4**.

- **Flash** (Pty) Ltd is itself a **registered TPPP** and holds the necessary licences and agreements with its retail agent network.

- MyMoolah purchases the eeziCash voucher product from Flash on behalf of the wallet user.
- **Flash generates the PIN** — MyMoolah does not generate, manage, or settle the cash redemption.
- The user redeems the PIN at any of Flash's **~240,000 retail agent locations** (Spar, Shoprite, PEP, independent traders, spaza shops, and freelance Flash agents) across South Africa.
- The cash dispensation is between the **end-user and Flash's retail network** — MyMoolah is not a party to the cash settlement.

2.2 Why Additional Sponsorship Is Not Required

Aspect	Detail
Nature of transaction	VAS product purchase (prepaid voucher), not a banking withdrawal or payment instruction
PIN issuer	Flash (Pty) Ltd — not MyMoolah
Cash settlement	Between end-user and Flash retail agent — outside MyMoolah's clearing obligations
Funds flow	User's wallet → MyMoolah Flash float account → Flash (supplier settlement)
Flash's own status	Flash is a registered TPPP with its own PASA registration
MyMoolah's role	Reseller/distributor of Flash's voucher product
Clearing system involvement	None — no payment instruction enters the banking clearing system

│  the end-user and Flash's retail agent network.          |
│  MyMoolah is NOT a party to the cash settlement.         |
│  No payment instruction enters the banking clearing      |
```

```
│  system. This is a VAS product purchase and redemption.   │
└──────────────────────────────────────────────────────────┘
```

2.4 Ledger Treatment

The wallet debit is recorded as a **VAS purchase** in MyMoolah's double-entry ledger:

```
DEBIT:   User Wallet (Liability)          R200.00
DEBIT:   User Wallet (Liability)          R  8.00  (service fee)
CREDIT:  Flash Supplier Float (Asset)     R200.00
CREDIT:  Commission Revenue (Revenue)     R  6.96  (fee net of VAT)
CREDIT:  VAT Control (Liability)          R  1.04  (15% VAT on fee)
```

The supplier float is settled with Flash via their standard B2B settlement process (prepaid float, topped up periodically by MyMoolah).

---

3. Integrated Retail Network — Partner Integrations

3.1 What It Is

The "Integrated Retail Network" referenced in our business case describes MyMoolah's API integrations with multiple **third-party service providers** that enable:

Function	Provider	Description
Voucher redemption	Flash (eeziCash, 1Voucher)	Users purchase voucher PINs redeemable at Flash's retail network
Cash deposits	EasyPay	Users deposit cash at EasyPay merchant terminals to top up their wallets
Bill payments	MobileMart (Fulcrum API)	Users pay electricity, municipal, and other bills from their wallets
Airtime & data	Flash + MobileMart	Users purchase prepaid airtime and data bundles
QR payments	Zapper	Users pay at 25,000+ Zapper-enabled merchants

4. Standard Bank Sponsorship — Position

4.1 Answer to PASA Query

Is additional Standard Bank sponsorship required for the withdrawal functionality?

No. The "withdrawal" functionality described in the business case is the **resale of Flash eeziCash voucher PINs**, which is a **Value-Added Service (VAS) product purchase**, not a banking withdrawal or payment instruction through the clearing system. Specifically:

1. **No payment instruction enters the banking clearing system** — the wallet debit and Flash float settlement are internal ledger operations between MyMoolah and its VAS supplier (Flash).
2. **Flash generates and manages the PIN** — MyMoolah is a reseller/distributor. The PIN redemption and cash dispensation occur within Flash's own retail agent network.
3. **Flash is a registered TPPP** — Flash holds its own PASA registration and manages its retail agent network under its own regulatory framework.
4. **The existing TPPP scope covers this** — MyMoolah's TPPP registration with Standard Bank as sponsor covers wallet management and VAS product distribution. The eeziCash voucher is one of many VAS products (alongside airtime, data, electricity, bill payments) distributed through the same platform.
5. **Funds flow is B2B supplier settlement** — MyMoolah pre-funds a float account with Flash. When a user purchases an eeziCash voucher, the wallet is debited and the Flash float is decremented. Periodic settlement between MyMoolah and Flash replenishes the float. This is standard B2B supplier settlement, not a consumer payment instruction.

4.2 TPPP Application Document References

The following sections in our TPPP application documents are relevant:

Document	Section	Content
Annexure A (Business Model)	Section 2.3 — VAS Marketplace	Lists Flash and EasyPay as VAS integration partners for digital vouchers
Annexure A (Business Model)	Section 2.2 — Digital Wallet	Describes wallet as platform for VAS purchases and bill payments
PASA Checklist Response	Section 3.1.2 — VAS Services	Lists airtime, data, electricity, digital vouchers, bill payments
PASA Checklist Response	Section 3.2 — Integration Partners	Lists Flash Partner API v4, MobileMart Fulcrum API, EasyPay, Zapper
PASA Checklist Response	Section 4.1.1 — BSP Agreements	Notes Flash Partner Agreement (agent of Flash for VAS services)
Standard Bank T-PPP Sponsor Brief	VAS Purchase Flow	Describes atomic VAS purchase with ledger treatment

---

5. Conclusion

The MyMoolah "Cash-Out Network" and "Integrated Retail Network" are **third-party VAS product integrations**, not proprietary banking withdrawal infrastructure. The existing Standard Bank TPPP sponsorship scope adequately covers these functions as they are VAS product distribution activities, not payment instructions through the banking clearing system.

MyMoolah's role is that of a **digital wallet operator and VAS reseller**, with all cash-out/voucher products being issued and managed by registered third-party providers (Flash, EasyPay, MobileMart) under their own regulatory frameworks.

Document prepared by: MyMoolah (Pty) Ltd **Date**: 25 March 2026 **For**: PASA TPPP Review — via APSA / Standard Bank Sponsorship
