How to generate unique EasyPay bill links

easypay
a better way to pay

Paying a bill without going anywhere

Unique QR codes could be sent to your customer for printed and electronic invoices / payment requests or a button they can simply click to pay a specific bill.

How to generate the link

Assuming the EasyPay number is

915552034115579 and the amount to be paid is

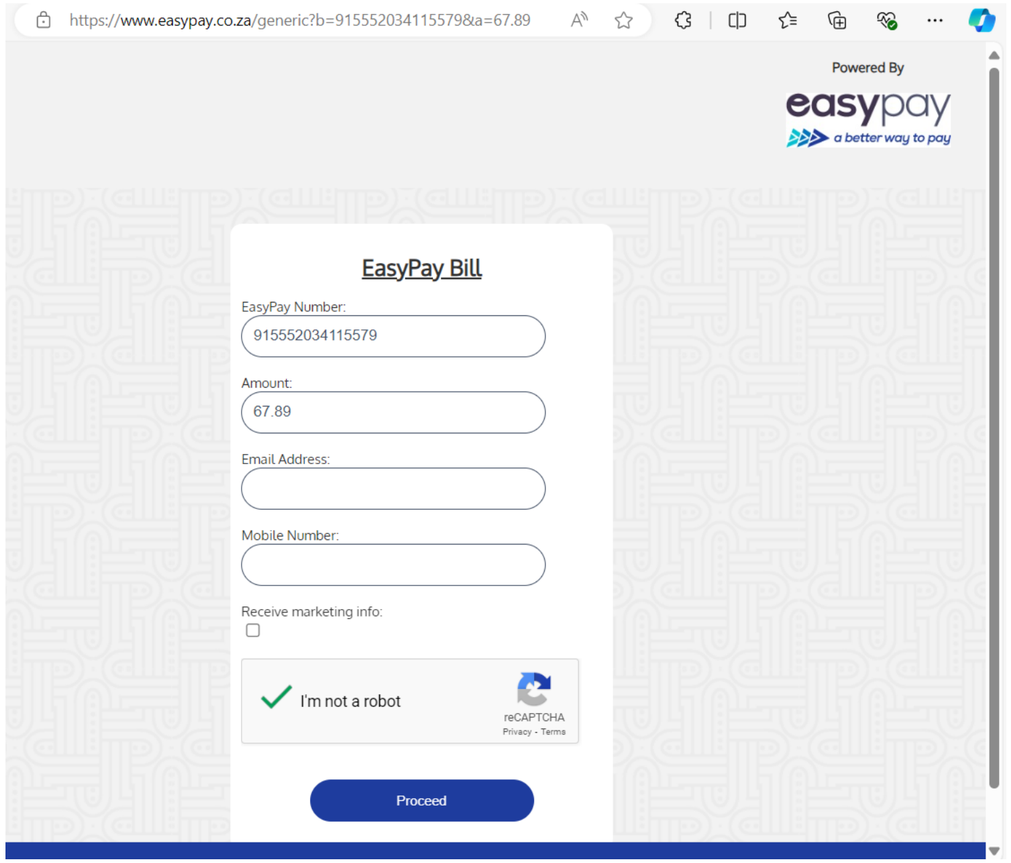
R56.78...

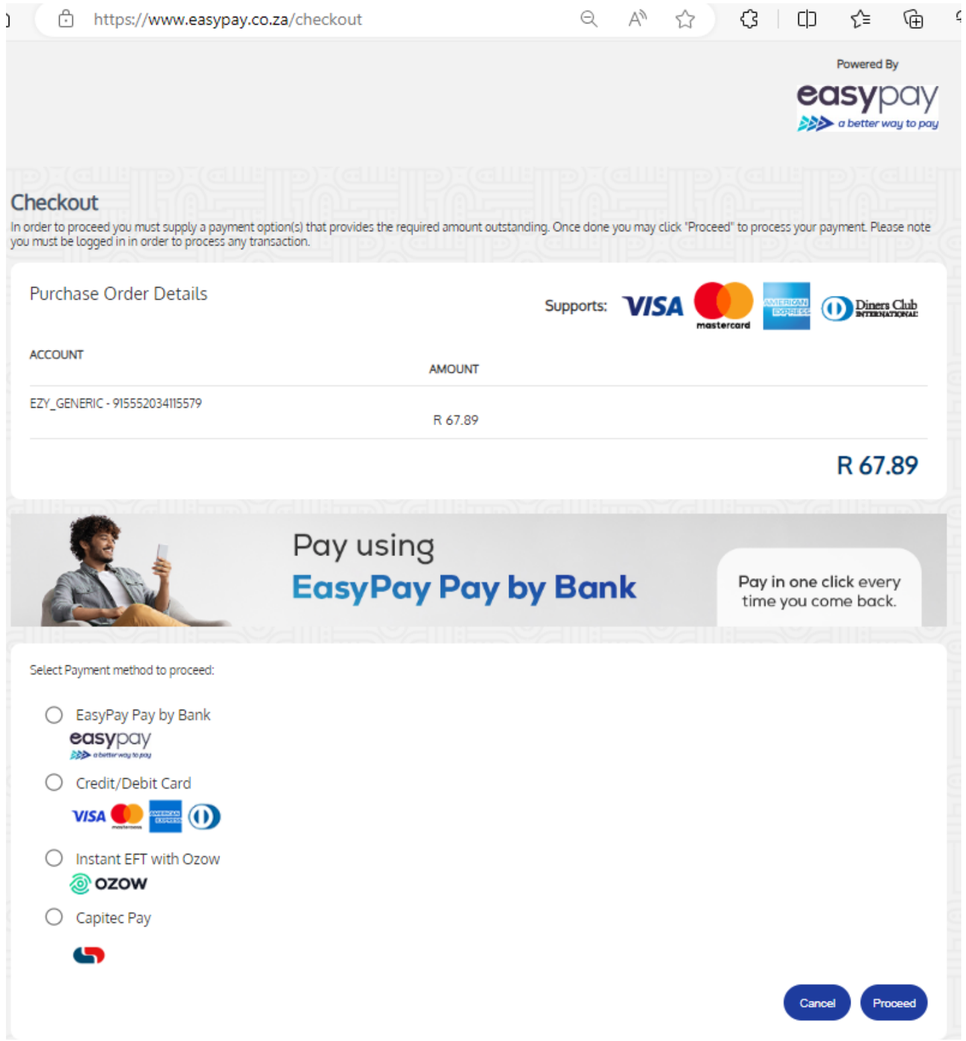
Then the URL would be:

www.easypay.co.za/generic?b=915552034115579&a=56.78

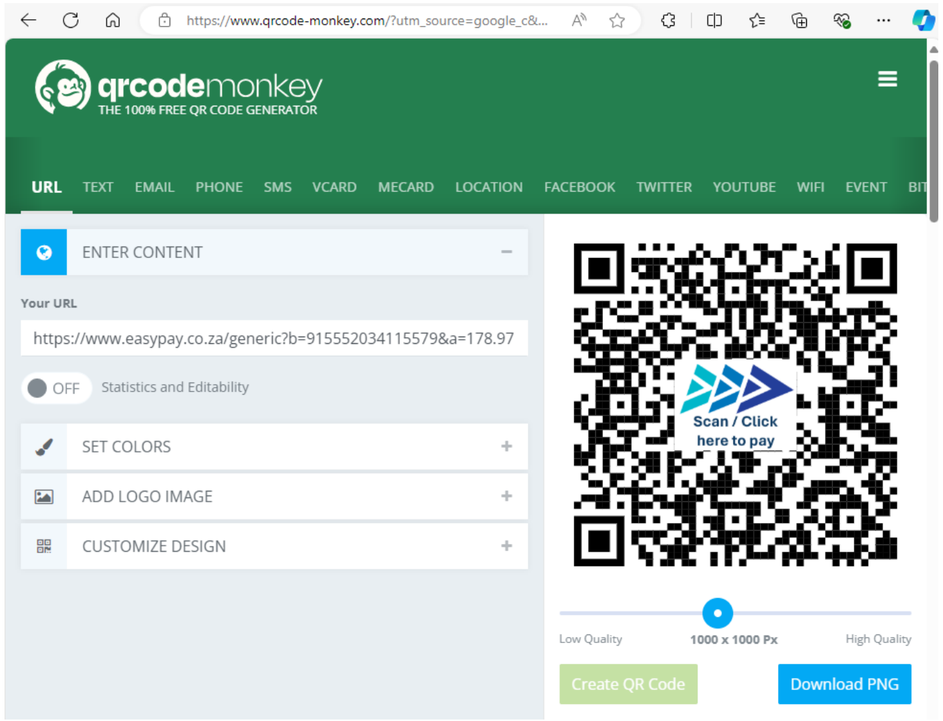
Note that each URL should be uniquely generated according to the EasyPay number and the amount to be paid.

Each unique URL will take you to the EasyPay website, where the details of the specific bill is automatically entered. Once you select ‘Proceed’, you will be directed to the payments options to complete the bill payment

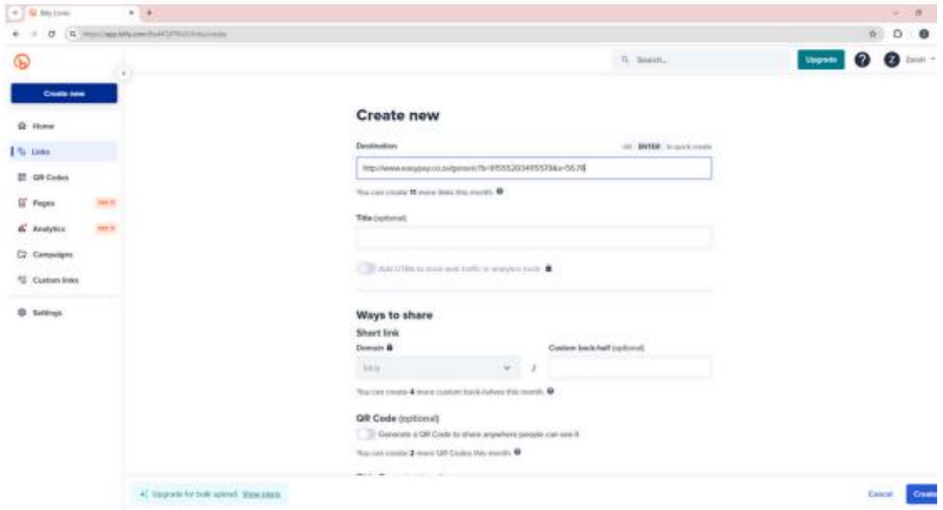




The URL can also be transformed into a QR Code, using a QR generator like www.qrcode-monkey.com to add onto printed statements



Or for an SMS, a shortened version of the link could be generated using https://bitly.com



easypay
a better way to pay

Electrically distributed versions could simply have a button

Click here to pay

Or a combination of QR and button
