

YOUR MANAGED CONVERSATIONAL PARTNER

Conversations Reimagined

We're not spending money on WhatsApp; we're buying a permanent, interactive billboard and point-of-sale terminal inside your customer's most-used application.

WHY CHATCENTRIC

Built differently, because your business is different

01

No Development Fees

Our platform is designed to accelerate deployment, not inflate budgets.

02

API-Agnostic Integration

Integrates into any existing system — CRM, ERP, ecommerce, payment gateways, or custom APIs.

03

AI-Ready

Location aware, document and image digitisation, intent-aware, and much more.

04

Rapid Deployment

From concept to live in weeks, not months. Speed without compromising quality.

05

Partner-Led Delivery

We co-design solutions with our clients as long-term partners.

06

Custom Products, Not Templates

Every engagement is a tailored conversational product, not a one-size-fits-all chatbot.

Technology that automates your business and drives engagement

Chatcentric Core

The engine that powers our chatbots

Chatcentric Pulse

Campaign heartbeat creates 10x more responses

Chatcentric Orbit

Chat interface that revolves around customers

Going beyond a simple chatbot...

We're not replacing applications, we're opening more channels into your business

Interactive media

Image, video, audio, voice-note, file, message button, list button, location.

AI vision

Image object recognition, image key-value pair extraction, receipt analyser, id/passport/licence decoding, and more.

Custom integration

Automate business processes by integrating chatbots into line of business systems.

Advanced logic

Real-time data validation, transformations, lookups, extractions, and more.

Voice-to-text

Decode voice-notes into plain text which is ideal when dealing with support tickets as example.

PDF generation

Create certificates, reports, receipts, invoices, etc. in real-time and drop the PDF in WhatsApp.

Menu workflows and injection

Multiple workflows in one chatbot with campaign injection into specific steps of a chatbot.

Click to chat

Enhance meta and google ads by adding the click-to-whatsapp buttons in online ads

Dominating the “last mile” of vouchers

In large parts of the market, the smartphone is the only computer owned, and WhatsApp the only operating system. You need to own that space.
